

Lofthitech: archi urgent

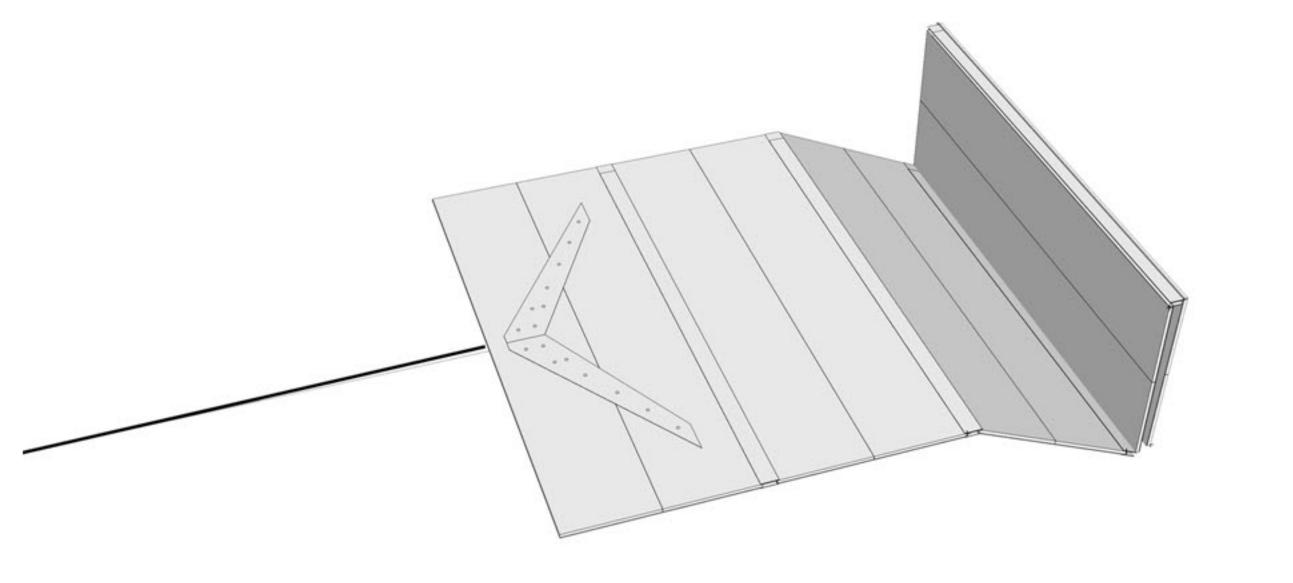

The Lofthitech, a mobile architecture concept, with modern design, and ultra fast assembly without tools solution, can be placed on any type of tamped and stable ground. It allows thanks to its ultra low costs to be accessible to all. Concept based on an assembly of two elements only: structure-blocks and window bay-roof. Lofthitech can be installed in record time (less than 1 hour for 100 M2) by unfolding the window bay-roof, encircling the structure-blocks. The hollow structure-blocks enable a technician to incorporate any option inside (air conditioning, bathroom, kitchen, plumbing, electricity, computer or audio element, heating, various storage, solar kit ...). These blocks can be ballasted or anchored to the ground. They consist of: iron frame, sandwich panels, aluminum composite, gaskets, bolts and silicone, water duct (rain water), tropical wood or Hi-Macs or any other equal or higher quality material. The unfoldabe window bay-roof is an assembling of bay window plates and sandwich panels plates (or other) connected together by a flexible triple glazing silicone tarpaulin (or other) high strength for unfolding/folding and optimization of space in transportation mode. Lofthitech is batch built from sandwich panels and aluminum composite plates length of 4 or 6 meters for providing DWL space (duplicable without limit) of 16m2, 24m2, 36M2, 64M2, 144m2, 288m2 etc ... Inhabitants of the poorest areas can build earthen wall block for € 0 and simply fix the unfoldable window bay-roof, insulating, strong and durable, that provides immediate character in their half "beldi", half "modern loft" construction.

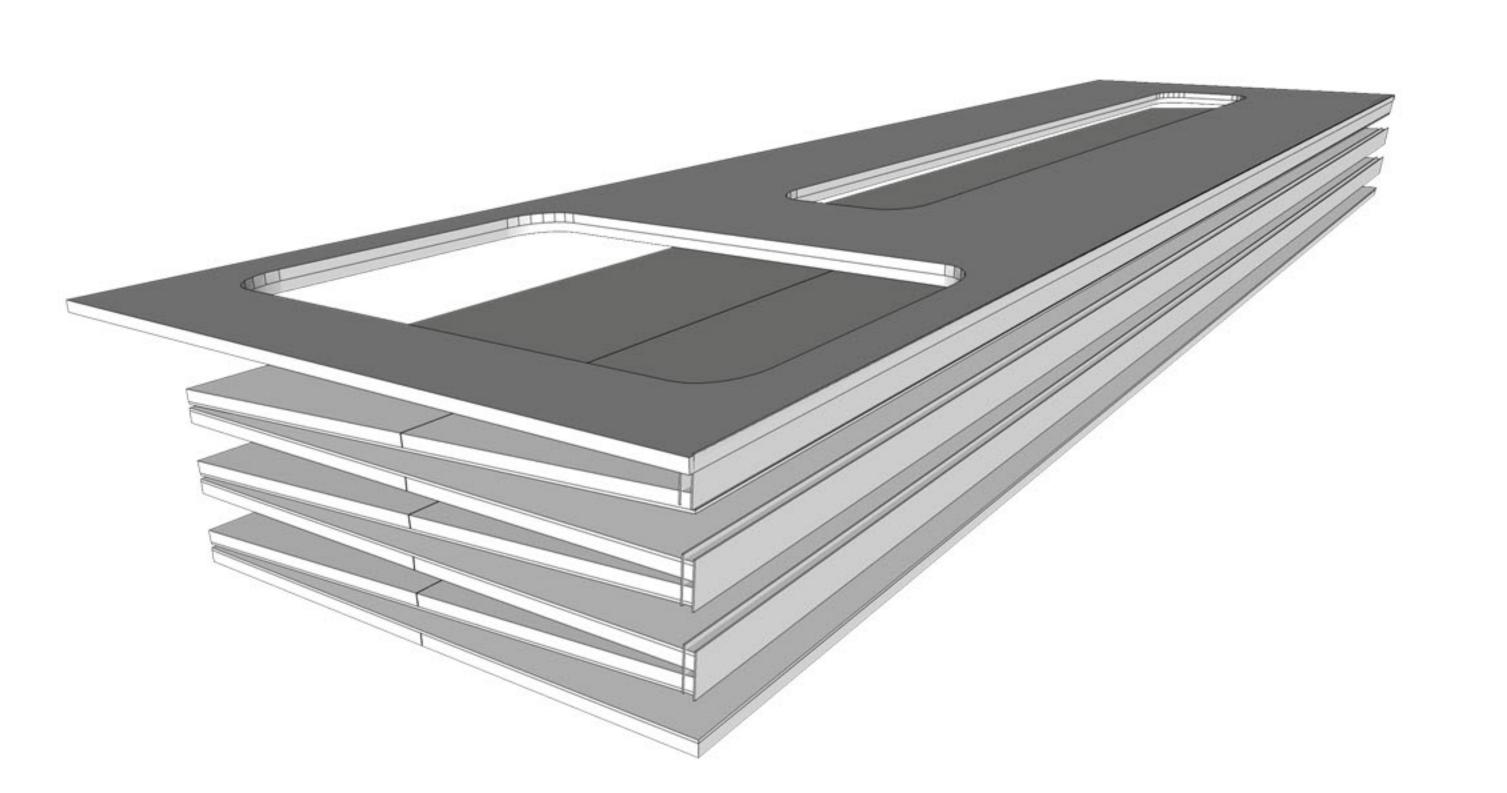

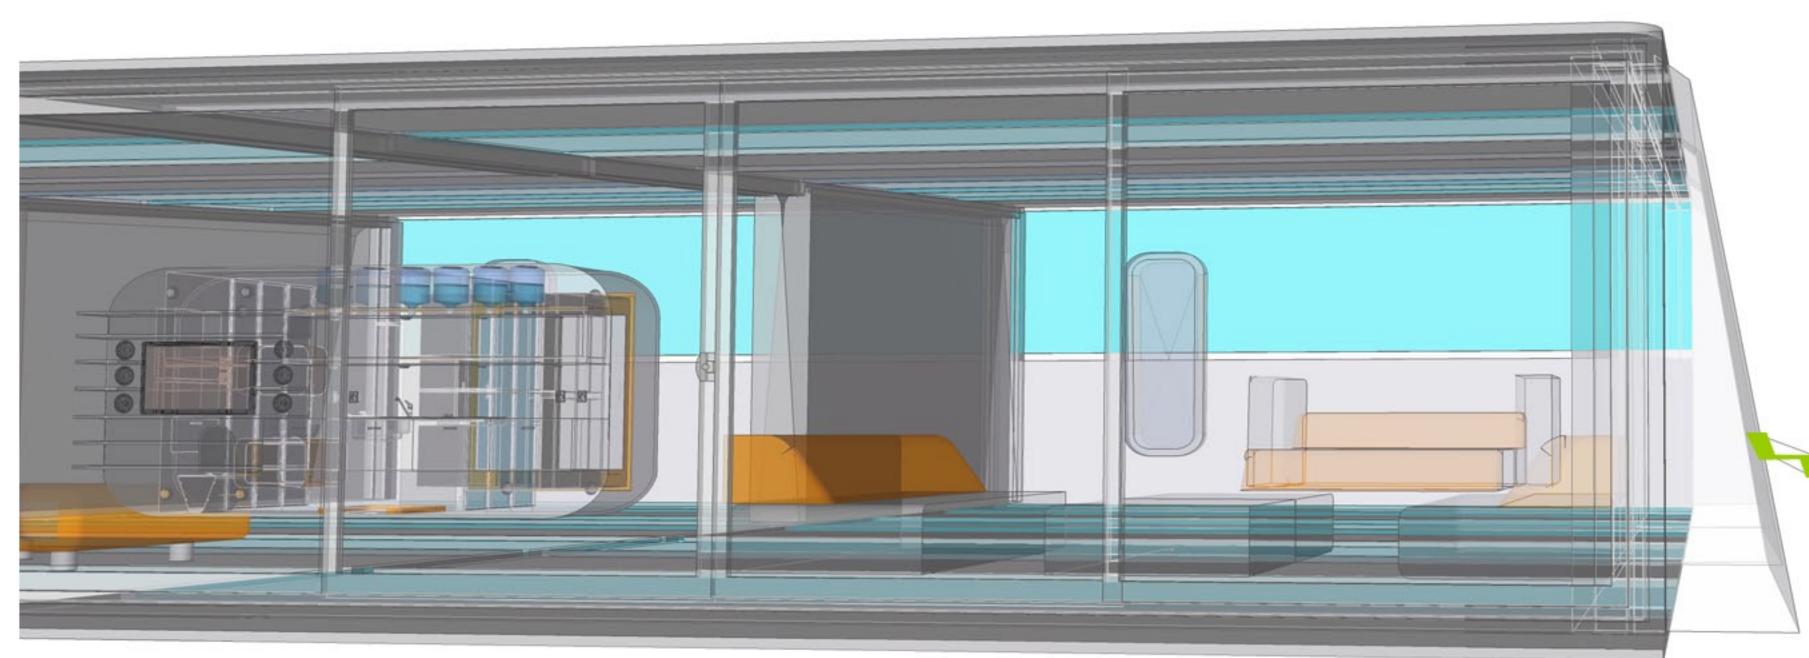

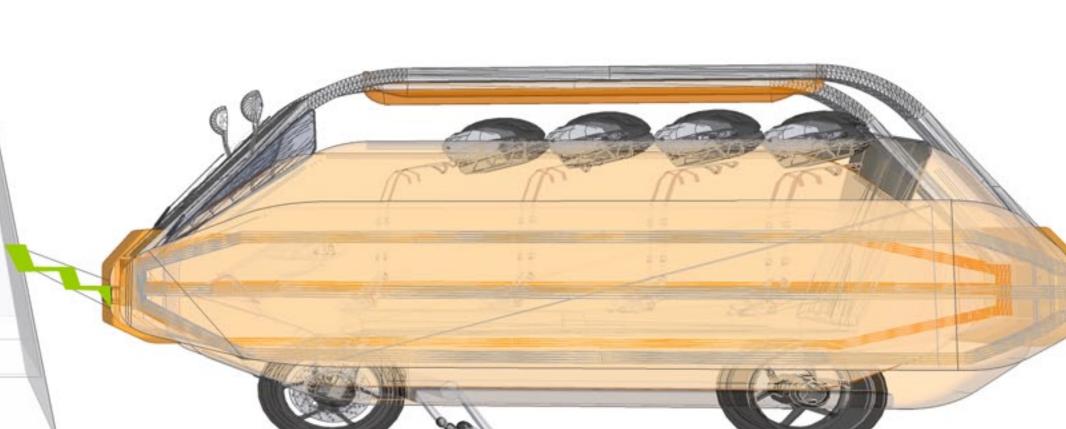

Lofthitech is a single mobile and duplicable architectural project. Board 1: 87 M2 in Marrakech, Chrifia, Amizmiz road, Morocco. Board 2: 30 M2 Brannay, Moulin à vent street, France. It is presented in installed mode, disassembled, transported, during assembly, connected to a water or energy supplier, with and without options.

Answering these questions was the Lofthitech mission: how to make easy access for the poorest people in the world to a decent living space, comfortable, robust, beautiful, design, lowcost, spacious, durable and allows to evolve (inhabitant and habitat)? How to own a living space by avoiding going through the usual intermediaries in the field of real estate, authorities, lenders, elected suppliers, which multiplies costs by 10 by 20 by 40? How to get out gradually living conditions dictated by the greedy lobbyists for 50 years? What design could allow all to be owner of his living space of at least 100m2 and a vehicle 4 places associated (scooterhitech) to a lower cost to € 10,000? Is there a company that provides overall life package for everyone, including all necessary hardware needs for human being? is there a place on the planet where infra structure and architecture decided by small group of men who made their calculation before all the others do not

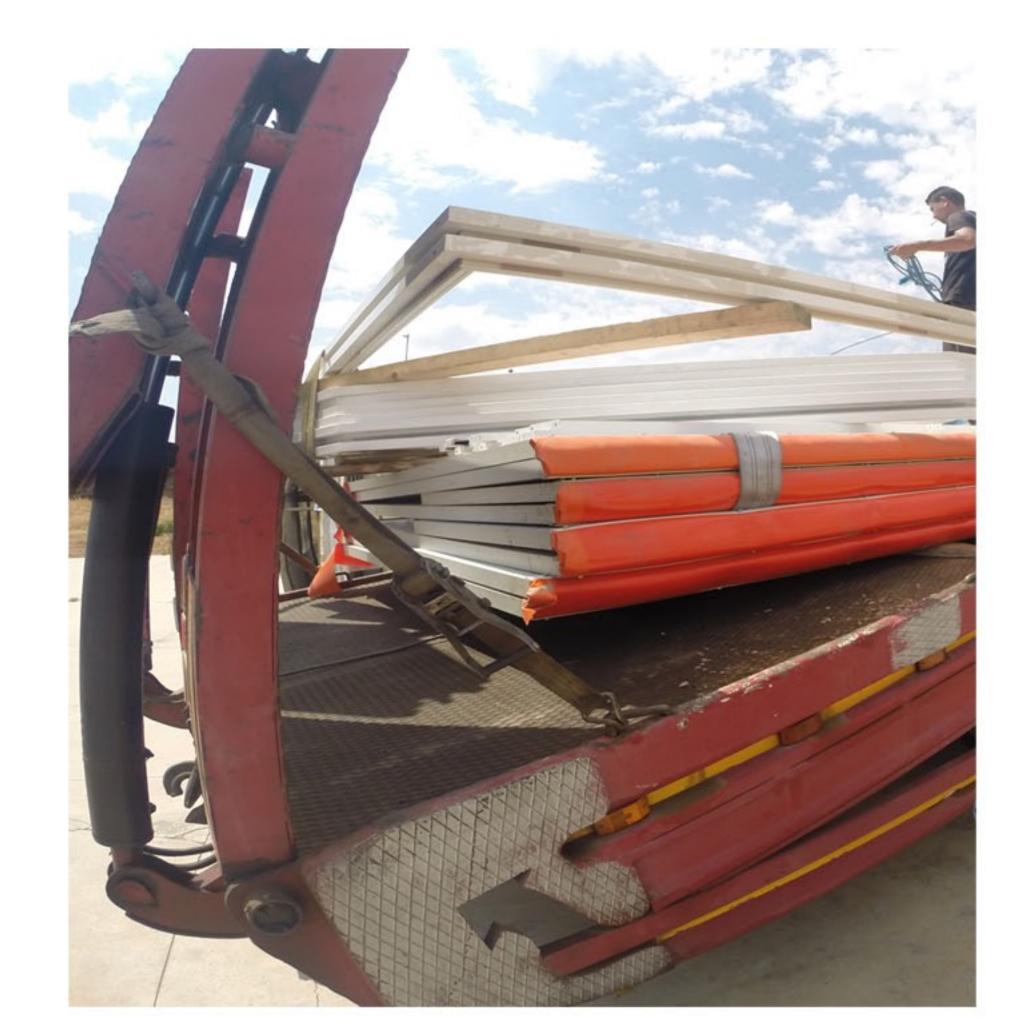

transforms us into slaves for life and do not make us suffocate? Why am I not allowed to build myself my living space on a land that I purchased? Is there any room left for my life on this planet, colonized and confiscated, and if not, why did nobody warned my parents that could avoid putting myself to the world in these conditions? Can we eradicate world misery, suffering and all sorts of crap thanks to the design? Would the victims of the Haiti disaster that continues to live for some of them in the same tents that UNHCR gave them 6 years ago, not be so happy to live in a small villa lofthitech, spacious half beldi half modern loft? Could the unfoldable insulating lofthitech "window bay-roof" provide a great service to many many many human beings in great distress? Does the word architecture means concrete everywhere or can we simply place a building without trapping the floor?

Lofthitech. Scooterhitech. Packagehitech. The project that kills the projects of those who kill us for far too long.

Lofthitech. behind the cry, a human-scale architecture emerges.

Lofthitech. Prefabricated in workshop. From ultra lowcost to extreme luxury.

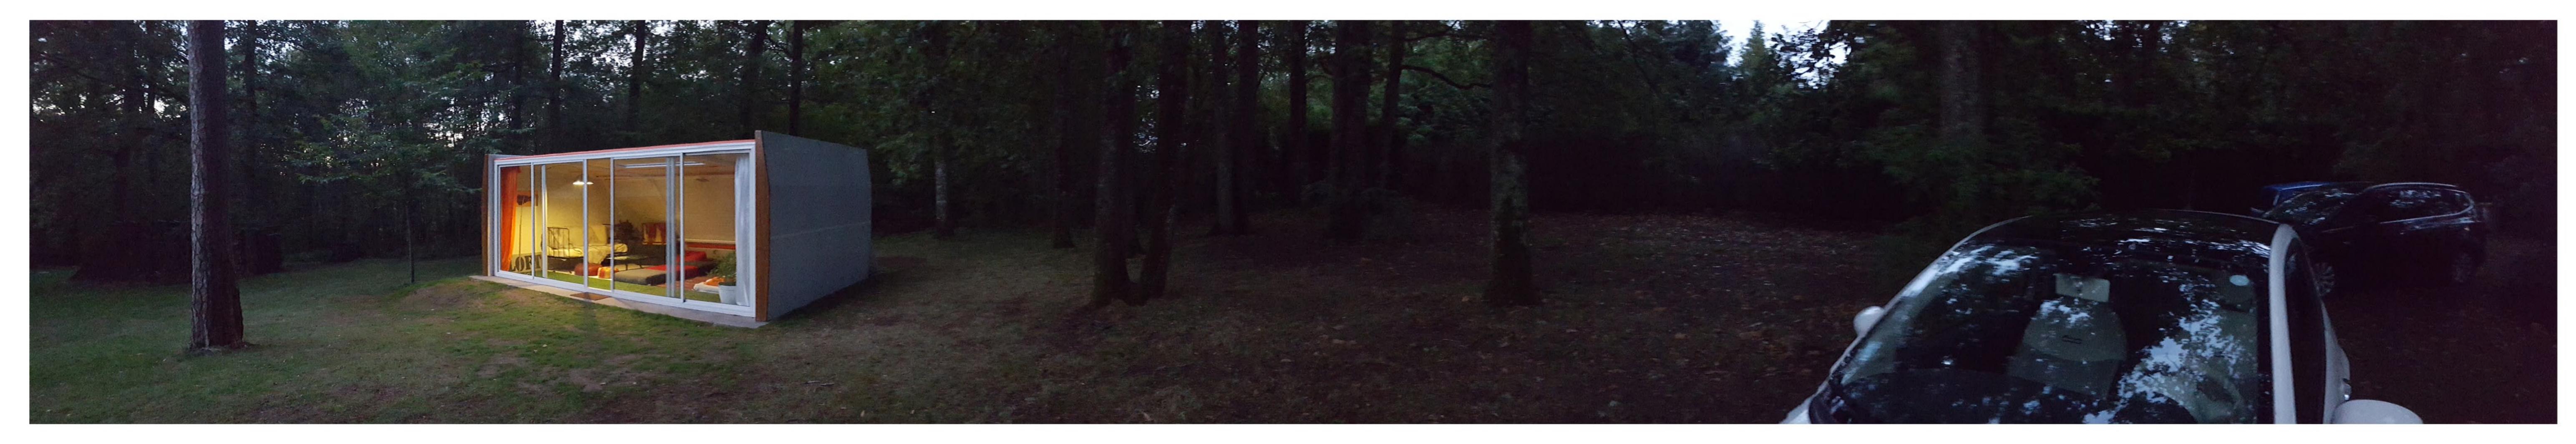

Megawall

Optionally, the multi service "megawall" block (which can be incorporated in the lateral blocks) on wheels, brings you everything a human being could possibly need for a healthy and organized life: megawall is placed inside the lofhitech and provided: front: kitchenette with electric hob, sink, cupboards, shelves, recharge drinking water, led lighting, electrical outlets, library corner, hifi tv shelf LED lighting, back: dressing, wardrobes, various storage compartments with sliding door, bathroom, shower, toilet, sink, mirror, shelf, led lighting, electrical outlets, waterproof trash, accordion door separators. Megawall is ready to connect to water or electricity network or completely independent: water refills to be plugged, solar and / or scooterhitech (multi service 4 seats cabin scooter, protected).
